
edit adda_config_HongPlate_Id9_TRO.py: liste auto-built by build_liste(frequencies, temperatures) → 9 rows incl. T (row 8!); avg file in adda_aux_input/…
python adda_main_control_rndorient.py 4608 flat indices → num_chunks=48 batch jobs
per chunk: adda_sub_control_randomorient.py config idx_s idx_e
acf.adda_call_randomorient: ADDA '-orient avg avg_params.dat' -scat_matr both -m … -lambda … -eq_rad … -eps 3, -dir = job folder
raw ADDA products (CrossSec*, mueller on 2deg grid) → zip whole folder → folder.zip, delete folder
rerun safety
NO skip logic — completed chunks ARE re-run unless you edit the chunk/index ranges
